About This Content

When the NAF collapsed, many Elven teams were left penniless. Those that survived the financial fallout are not as rich as their High Elf cousins nor as well equipped, but they still sure know how to play!

STRENGTHS

With their Linemen and Throwers costing less than for other Elf teams, Elven Coaches can afford to have a few spare waiting on the side lines. As they also benefit from the same Agility and choice of Star Players as other Elf teams, they stand a good chance of dominating a running or passing game.

WEAKNESSES

The low Armour value of Elven players means they won't last long once the slower and tougher teams catch up with them. Couple this with slightly slower movement compared to their kin, Elf teams are likely to find themselves playing a defensive game more often than they'd like.

Lord Quasar has been forced to retreat into his last bastion, the Hex Stronghold. Now each band sees a chance to seize control of the fractured kingdom!

The Battle for Luxdom has begun!

There is 1 door on each wall of the hex stronghold, these are the only ways in and out. The 2 draw bridges provide the only access into the Castle.

The tutorial is only available in Russian.. it is a waste of money that you have to buy extra addon's.

[I can tell there is a lot of love poured into this game.](#)

[I can see a bunch of fairly interesting ideas stitched together.](#)

[I can also see a bunch of issues just in the first area.](#)

[Tutorial is intrusive and not intuitive.](#)

[Combat controls are strange, and poorly explained, especially the spell casting.](#)

[Several CTD's on entering fighting space.](#)

[Level design makes little sense. I felt like there are a bunch of paths placed there without thought as to why.](#)

[I also don't understand why I can Zelda attack things but then have a final fantasy style combat section.](#)

[Anyway, there might be something here if you are willing to overlook the many odd and buggy choices.](#)

[. Finally a virtual desktop that works with laptops! I'm using an alienware graphic amplifier with a GTX1080. not 100% sure if it will work for everyone but it works for me so check it out if you have a similar set up. The breakout feature is still not working 100% and I'm still crashing out every now and then but for early access this is excellent.. This game is the waste of money.](#)

[I tried to like it but it is no good at all.](#)

[The first few level is fun. However, after the first 5 level, the game is getting harder and repetitive.](#)

[There is no real different between the power of each god. No new strategy.](#)

[Not recommend. Even at the discount I still miss my money.](#)

[Over all this is a waste of time and money](#)

Standing with these characters is really good, but OMG standing next to Celeste is something else, I've said enough!. This review is based on one thing - the value of what you're getting. Air Guardians is an extremely cheap game, and it doesn't come with much. There's only half a dozen levels, the graphics aren't really that interesting, and the voice acting and story are completely forgettable. But what's there still plays well enough. The controls function, and the gameplay works, and it's enough for some small amounts of entertainment. If you're looking for a deep, enthralling, memorable experience, you're not going to find it here. But if you're looking for something to drop a couple bucks into for some cheap fun, this isn't that bad.. Okay. So first things first, I absolutely love this game.

There are several different ways to play the game, which are all fun. If you're the devil, you can try and be sneaky, killing them off one by one, or you can be really gung ho about. Both have their advantages, both have their disadvantages.

As the survivors you also have different play styles which revolve around the other players in the game. You can try and work together, you know safety in numbers, which is an extremely valid point which I will explain in a minute, or you can go solo. Because most of the time when you encounter other players, everything devolves into a giant slap fight.

Now as I said there is safety in numbers, because it's near impossible to capture the devil solo. Let me explain. The system by which you capture the devil (and also revive others) is button mashing. You have to mash the hell out of your space bar. It seems very controller-y, so hopefully the game will eventually get full controller support. Because as it is now, I sometimes experience issues where the button mashing doesn't work with controllers.

Something else, this game really gets to you. The first couple times you play the game you'll be a bit confused. But once you've gotten the hang of it, you could end up being the last person alive besides the devil, with four more items to collect, feeling the tension build further with every item collect, and every time you walk through a door wondering "Is this it? Is this the one where the devil's waiting on the other side?".

Some things that I wouldn't really call cons, but I think could use some adjusting:

The Sprinting System - Basically your character can sprint for a couple seconds, and if you step on a puddle or walk over a rock you fall over. That's pretty cool. What isn't cool is that when your character runs out of sprint, rather than just slow down to walk they trip. This is something that is guaranteed to happen. Your character will trip when you run out of sprint, which brings up a problem. The devil can sprint forever, and will only trip due to obstacles, he/she also runs ever so slightly faster than you. So if you get chased by the devil, you have to hope you can escape through some scene transition or you're dead. Because nothing stops the devil from camping by your body once you've fallen over.

The Button Mashing - If this game ever got full controller support, this would be okay, but even then not everyone has a controller. So I think this whole concept needs to be reimagined somehow, because I could totally see this feature being the death of my keyboard.

The Slapping Feature - You can slap any character and they get slapped aside, and have a period where they have to stand back up and where they are invulnerable. The problem is, slapping itself has no cool down. I've very commonly seen when multiple people are in an area just slapping one another nonstop, not allowing either of them to get their items. I believe that the slap itself should have a cooldown, then people would be less inclined to slap every single person they pass in the halls. After all, wasting that slap on a person only to turn the corner and face the devil would be very bad. That slap could literally be the difference between life and death for them if it had a cooldown. As it is now, when you encounter someone in the hallway, even if neither of you ever stop moving, there is a 90% chance they will slap you.

Now is this game worth ten dollars when it's on sale?

Definetly.

Is this game worth fifteen dollars?

Yes.

I would rate this game as a 7/10

And I would recommend it.. Game is fun for what it is. I recommend if you like pokemon type games.. I dont think this game

gets enough support.....

1. open game
2. holds space while testing controls
3. takes a billion screenshots
4. after 2 minutes of intense gameplay i tab out game cus someone skypes me
5. goes back in game
6. doesn't open up and back screens computer
7. cursors than gets trapped in the middle of the screen and i cant move it
8. RESTART MY PC MULTIPLE TIMES

and now anytime i start a level i dies on the loading screen

I'll end on a quote "11/10 IGN, still better than Call of duty". I had a lot of fun playing this game.. I recently took advantage of Greenmangaming's sale over the weekend, and bought 6 games. One of these, unfortunately, was Alice VR.

Apparently this game does not support touch controls. There are at least 6 ways to launch this game, with the majority of them being different ways to play on Oculus. With every method of launching the game, it crashes when you push any button on the touch controllers.

I would just use an Xbox controller, but the Marvel bundle of the Rift doesn't include a controller adapter, and I'm trying not to shell out the money for one right now.

Steam can't refund because it was bought through GMG, and GMG doesn't do refunds. At least I bought it on sale?

Edit: I beat the game, and boy oh boy it is not fun. Walking simulator, barely any story or decision, and literally the only time I've closed my eyes because the game made me sick. Avoid.. A small, single button game. A good waste of time if you want to do something mindless for easy achievements.

Gameplay Mechanics: 3/3

I was happy that there was no lag when I clicked my mouse to release the ball. A lot of smaller games like this seem to have that issue. Luckily this one does not.

Music/Sound: 3/3

There are a couple of music tracks you can choose from, all of them a mix of 8-bit and dubstep. Honestly, the music was my favorite part of the game. Catchy and enjoyable to listen to.

Overall, I don't think this game is worth .99 cents. If it was cheaper, I'd say get it since it's a nice little time waster. I wouldn't recommend it to anyone however.. Although the game is rather short but a lot of meaning is conveyed.

The pictures are also good and its OST are nice and have a calm atmosphere.

Good work Mojiken Studio & Toge Productions, :)
